VU QUANG THINH

Senior Software Engineer | Fullstack Developer | Backend & Blockchain Engineering

Hanoi, Vietnam • +84 39 570 8005 • quangthinh.dev@gmail.com • vuquangthinh.github.io

PROFESSIONAL SUMMARY

Senior software engineer with 13+ years of experience designing and delivering web platforms, backend services, data-driven applications, and blockchain products. Hands-on across Python/FastAPI, Node.js/NestJS, React/Next.js, databases, API design, and cloud-native deployment. Experienced in owning features end to end, from data models and business workflows to production-facing interfaces and operations.

CORE SKILLS

Backend: Python, FastAPI, Node.js, NestJS, Express.js, PHP, Golang | Frontend: React, Next.js, TypeScript, Vue.js, React Native | Web3: Solidity, EVM, Hardhat, OpenZeppelin | Data: PostgreSQL, MySQL, MariaDB, MongoDB, Redis, GraphQL | Infrastructure: Docker, k3s, Nginx, CI/CD, AWS, GCP

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Freelance / Contract | *2022–Present*

Built and evolved fullstack web applications, financial analytics systems, healthcare revenue operations modules, and blockchain-based products using Python, Node.js, React, and Solidity.

Senior Software Engineer — Agiletech | *2015–2021*

Developed and optimized web applications using Node.js, React, Express, NestJS, and LoopBack. Researched EVM and non-EVM blockchain technologies, built decentralized applications, and delivered internal technical training.

Senior Software Developer — Freelance | *2014–2015*

Developed PHP applications with CodeIgniter, Yii/Yii2, and WordPress.

Software Developer — Muasam3D (Part-time) | *2012–2014*

Worked on fullstack web development while studying at Hanoi Open University.

SELECTED PROJECTS

AmbuSun | RCM Services | *Healthcare Revenue Cycle Management* | *Fullstack Developer*

Healthcare revenue cycle management platform helping organizations improve financial performance by reducing claim delays, managing denial lifecycles, and accelerating reimbursements. Supports workflows spanning patient access, billing, collections, and payer follow-up.

- Built and evolved reporting, denial management, and AI Chat modules for revenue cycle teams.
- Implemented product workflows, backend APIs, data models, dashboard logic, and user interfaces.
- Delivered operational features supporting claim visibility, denial follow-up, and day-to-day revenue operations.

Quantizero | *Financial Analytics & Trading Signals* | *Fullstack / Backend Developer*

Financial analytics and trading-signal platform.

- Built backend services and APIs using Python and FastAPI.
- Developed interactive analytics dashboards using React and TypeScript.
- Deployed and operated platform workloads on k3s infrastructure.

Untangled Finance | *DeFi Platform* | *Web3 Developer*

Developed Solidity smart contracts for decentralized finance functionality and built Vue.js user interfaces integrating Web3 services.

IMPT | *Environmental Impact / Web3* | *Fullstack Developer*

Developed an Expo mobile application, Next.js fullstack components, and Solidity smart contracts; integrated mobile and web interfaces with blockchain features. Used Slither and Tenderly tooling.

Knight War — The Holy Trio | *Blockchain Gaming* | *2021–2023*

Developed Solidity smart contracts for an NFT marketplace and farming; implemented unit tests and a Node.js/NestJS blockchain event indexer synchronized with PostgreSQL; supported Web3 frontend integration.

DarePlay (DareNFT) | *Gaming / NFT Infrastructure* | *2021–2023*

Implemented Solidity contracts for marketplaces, staking/farming and launch workflows; built NestJS APIs interfacing with blockchain indexers and supported Next.js/React frontend integration.

VitaminSpy | *Advertising Analytics / Data Platform* | *2022–2023*

Designed NestJS APIs and data models, implemented ETL pipelines using RabbitMQ and MongoDB, developed Next.js interfaces, and supported Nginx and CI/CD deployment.

Additional Projects | 2016–2024

Lonely (2024): Built a fullstack application using NestJS, PostgreSQL via Supabase, and ReactJS (ViteJS). • SwapExchange (Uniswap V2 fork): Solidity/Truffle and React branding/deployment updates. • H3ROVERSE: NFT contracts, marketplace scripts, React frontend. • MetaSoftware: React, Apollo GraphQL, PostgreSQL. • Fina (DatXanh): fintech APIs, MariaDB schemas, Next.js. • ZMOOZ: interactive content editor and publishing integrations. • Luxstay: Laravel/Lumen backend and OTA calendar/Stripe integrations. • Fleet Management / BeApp: React and Express APIs. • UrSmiles: dental booking backend and React Native app. • The Smart Light: e-learning with Laravel/Vue. • Freshfoods.vn: Yii2 e-commerce and WordPress.

EDUCATION & RECOGNITION

Hanoi Open University — Graduated 2015

ACM-ICPC International Collegiate Programming Contest (2015) • Third Prize, Vietnamese Student Informatics Olympiad (2015) • MOS Certificate
